WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Moderately Strong, Gusty Northerly Winds / Low Relative Humidity (RH) through Saturday***

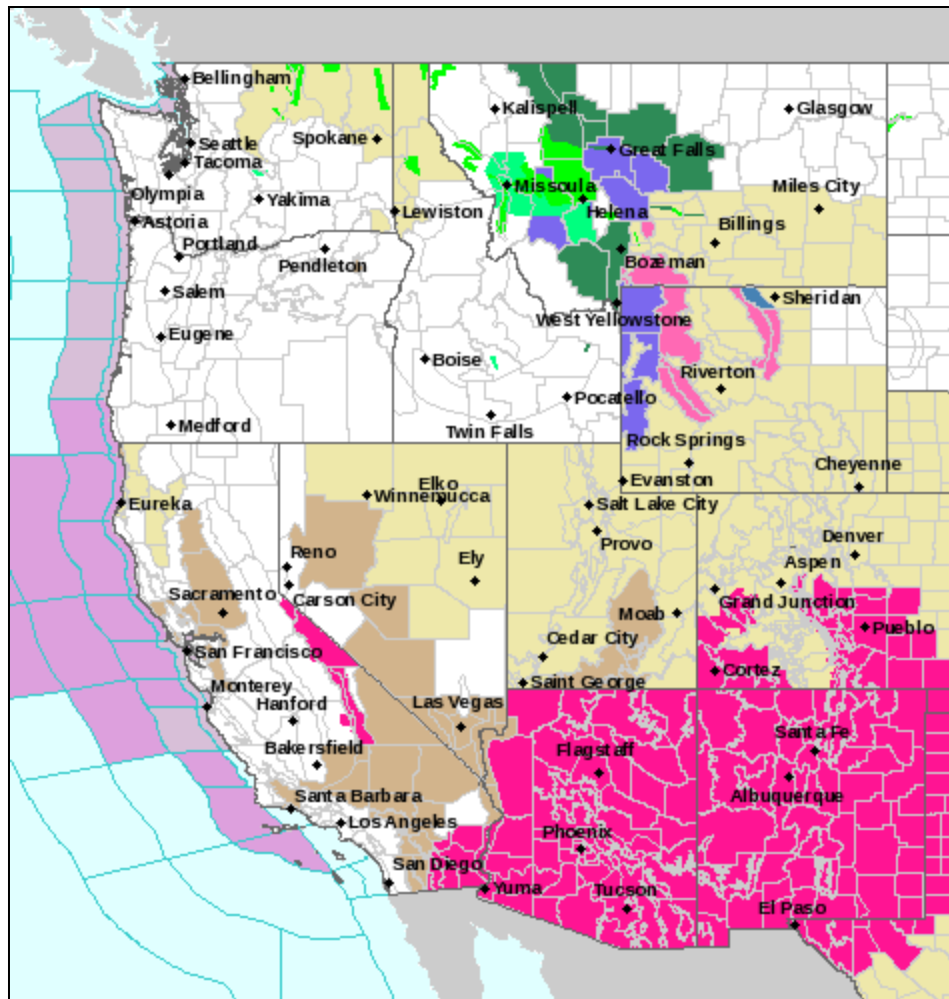

The region will be under a northerly flow between a low pressure moving into the Great Basin and high pressure strengthening out over the Pacific. Moderately strong, gusty N to NE/downslope winds will continue but weaken somewhat today, then become less widespread tonight, ending in many areas Saturday afternoon. The strongest wind gusts will be 35-40 mph through early today, locally 45 mph in favored areas, then mostly 25-35 mph after that through Saturday. Minimum RH of 10-20% today-Sunday. A few afternoon showers and isolated thunderstorms are possible around the Lake Tahoe area on Saturday/Sunday. A few, mainly mountain showers or thunderstorms are possible Monday-Thursday under an unsettled weather pattern. Afternoon highs will generally be a few degrees above normal the next 7 days.

SOUTHERN CALIFORNIA

Strong westerly afternoon and evening winds across the desert passes today

An area of low pressure will drop into the Great Basin from the Pacific Northwest bringing westerly afternoon and evening winds of 20 to 40 mph with gusts to 60 mph to the wind prone mountain and desert areas today. Significant cooling will occur and there will be a big increase in humidity away from the deserts today. Maximum temperatures will be in the mid 50s to mid 60s across the mountains and upper 60s and 70s in the valleys today. There will be little change in temperature across the region today through the end of next week as the low pressure area remains over the Great Basin through early next week and then gets replaced by another low coming in from the west. Isolated afternoon showers and thunderstorms will form over the Sierra Saturday through the end of next week. Depending on the exact track and strength of the second low, there may be a chance of showers and thunderstorms across the entire region late next week. The marine layer will become deep by next Friday, with morning low clouds and fog making it over the lower coastal mountain slopes through the end of next week.
